NHA Recognizes Three Hydropower Projects for Outstanding Stewardship OSAW Awards Highlight Exceptional Achievements in Hydro Industry

Washington, D.C. (April 26, 2010) -- The National Hydropower Association today honored the exceptional programs and practices of three hydropower organizations today through its annual Outstanding Stewards of America's Waters (OSAW) Awards. The winners -- American Municipal Power, Chelan County Public Utility District #1, and New York Power Authority, -- have established important, collaborative projects that serve as models for the hydro industry.

"The OSAW awards recognize the industry's most innovative approaches to fulfilling its obligations as stewards of our rivers and natural resources," said NHA Executive Director Linda Church Ciocci. "NHA recognized this year's winners for creating innovative solutions to significant challenges and tested approaches that will raise the entire industry's performance, as well as fulfilling their legal and regulatory commitments."

NHA conferred two awards in the category of Recreational, Environmental, and Historical Enhancement this year:

- Chelan County Public Utility District #1 won for the design and implementation of the Chelan River
 Habitat Restoration and Enhancement Project in Washington. In relicensing the Lake Chelan Hydro
 Project, Chelan had the opportunity to add and improve fish habitat. Working with many
 stakeholders, Chelan restored year-round flow in the Chelan River of 80 cubic feet per second, while
 also adding about four acres of spawning habitat for salmon and steelhead in the lower reach and
 tailrace. Visit http://www.chelanpud.org/ for more details.
- New York Power Authority won for a Common Tern Habitat Improvement Project at its Niagara
 Power Project in New York State. Because the endangered common tern has very few suitable
 habitats for nesting, NYPA created two state-of-the-art gravel nesting beds that offer 3,400 square
 feet of improved habitat. Installed in the spring of 2009, the project has already achieved
 impressive results, supporting 550 new nests and more than 1,000 fledgling chicks in the first season
 alone. Visit http://www.nypa.gov/news.html for more details.

NHA also conferred one award in the Operational Excellence category this year:

American Municipal Power won for Safety Excellence at its Belleville Hydroelectric Plant/OMEGA
JV5 in Belleville, West Virginia. Thanks to the program, AMP has completed more than 150,000
person-hours without a lost-time injury or reported incident over the last 10 years. This safety
record is especially notable as the employees created their safety program from scratch and no
employees had previous hydro experience. As AMP expands its hydro assets, they have plans to
implement their safety program in other facilities. Visit http://amppartners.org/ for more details.

NHA's selection panel, which includes representatives from across the industry and media interests, determined the OSAW Award winners based on their project or program's initial challenge, innovation, collaboration with stakeholders, and results. The panel judges every project by its own merits.

NHA presented the awards today at the association's annual conference in Washington, D.C.
